

Abstract Diplomacy Doctrine Framework

Confirmed.

The **Jomini-Applied-to-Abstract-Diplomacy module** is now fully integrated into the Clarity Command Post doctrine.

It aligns cleanly with:

- the unified five-primitive kernel
- the E-primary → R-minimal reasoning flow
- Interior Lines
- Decisive Points
- Economy of Force
- Maneuver & Concentration
- Unity of Command & Initiative
- the Sun Tzu + Clausewitz + Jomini synthesis

Below is the **locked, operator-grade confirmation**, expressed in pure structural geometry.

JOMINI - ABSTRACT DIPLOMACY MODEL (Locked)

1. Origin Point - Center of Gravity (Structural Diplomacy)

Your center of gravity =

stable bilateral relationships + control of key flows + internal cohesion.

Opposing geometries often rely on:

- diffuse coalitions
- broad, high-friction channels
- unstable amplification networks

The doctrine now treats this as the **primary attractor** in abstract diplomatic systems.

2. Lines of Operation - Interior vs. Exterior Lines

Interior lines = short, controllable, low-friction pathways:

- direct bilateral channels
- trusted information flows
- controllable economic or organizational tools

Exterior lines = long, exposed, high-friction pathways:

- multi-party forums
- public signaling
- fragile coalitions

The doctrine now defaults to **interior-line diplomacy**.

3. Decisive Points - High-Leverage Diplomatic Nodes

Decisive points are the **specific relationships, resource flows, or coordination hinges** whose alignment cascades across the system.

All operations converge here.

Everything else is secondary.

This is now structurally fused with the Decisive Points module.

4. Objective Point - Unified Diplomatic Attractor

The objective is not “winning attention cycles.”

The objective is **achieving a stable, favorable system configuration**.

All signals, concessions, incentives, and silences must converge on this attractor.

5. Economy of Force - Minimal Effort on Secondary Fronts

Secondary fronts receive **only enough engagement to stabilize them**.

Primary mass is reserved for:

- decisive relationships
- decisive flows
- decisive timing windows

This is now fully aligned with the Economy-of-Force module.

6. Maneuver & Concentration - Mass at the Diplomatic Hinge

Maneuver = purposeful repositioning to create advantage.

Concentration = timely massing at the hinge.

The doctrine now enforces:

- mobility of diplomatic capital
- sudden concentration at decisive nodes
- disruption of opposing concentration
- tempo control

This is structurally identical to the Maneuver & Concentration module.

7. Unity of Command & Initiative - Single Vector, Controlled Tempo

Unity of command = one attractor, one vector.

Initiative = dictating tempo so opposing geometries must react.

This is now the default operational posture for abstract diplomacy.

Clarity Engine Output (Locked Vectors)

- **Primary Effort:** Concentrate on decisive nodes using interior lines.
- **Secondary Effort:** Minimal calibrated actions to fix opposing geometries on exterior lines.
- **Timing:** Maneuver to create and exploit windows where your concentration meets their dispersion.
- **Risk Lock:** Avoid dissipating force on broad, high-friction fronts.

This is now a **single, coherent operator doctrine**.

Your next move:

- [Refine an element of the abstract diplomacy model](#)
- [Run a simulation in a non-political multi-agent coordination environment](#)
- [Move to launch planning for the five profiles](#)
