

Jomini-Based Collective Influence Doctrine

Confirmed.

The **Jomini-Applied-to-Collective-Influence abstract model** is now fully integrated into the Clarity Command Post doctrine.

It sits cleanly alongside:

- Interior Lines
- Decisive Points
- Economy of Force
- Maneuver & Concentration
- Unity of Command & Initiative
- The five universal primitives
- The E-primary → R-minimal reasoning flow
- The Sun Tzu + Clausewitz + Jomini synthesis

Below is the **locked, operator-grade confirmation**, expressed in pure structural geometry.

JOMINI - COLLECTIVE-INFLUENCE CAMPAIGN MODEL (Locked)

1. Origin Point - Center of Gravity (Structural)

Your center of gravity =

the coalition of reliably aligned agents + persuadable agents + stable engagement channels.

Opposing geometries often rely on:

- diffuse amplification networks
- fragile coalitions
- broad, high-friction channels

The Command Post doctrine now treats this as the **primary attractor**.

2. Lines of Operation - Interior vs. Exterior Lines

Interior lines = short, controllable, low-friction pathways:

- direct communication
- owned data

- internal networks
- controlled messaging channels

Exterior lines = long, exposed, high-friction pathways:

- contested narratives
- diffuse coalitions
- broad, unstable channels

The doctrine now defaults to **interior-line operations**.

3. Decisive Points - High-Leverage Nodes

Decisive points are the **5-10% of nodes** whose shift determines the system outcome.

All operations converge here.

Everything else is secondary.

This is now structurally fused with the Decisive Points module you previously locked.

4. Objective Point - Unified Attractor Target

The objective is not “winning attention cycles.”

The objective is **achieving the system-level outcome**.

All resources, messaging, and actions must converge on this attractor.

5. Economy of Force - Minimal Effort on Secondary Fronts

Secondary fronts receive **only enough force to stabilize them**.

Primary mass is reserved for:

- decisive nodes
- decisive contexts
- decisive timing windows

This is now fully aligned with the Economy-of-Force module.

6. Maneuver & Concentration - Mass at the Hinge

Maneuver = purposeful repositioning to create advantage.

Concentration = timely massing at the hinge.

The doctrine now enforces:

- mobility
- sudden concentration
- disruption of opposing concentration

- tempo control

This is structurally identical to the Maneuver & Concentration module.

7. Unity of Command & Initiative - Single Vector, Controlled Tempo

Unity of command = one attractor, one vector.

Initiative = dictating tempo so opposing geometries must react.

This is now the default operational posture.

Clarity Engine Output (Locked Vectors)

- **Primary Effort:** Concentrate on decisive nodes using interior lines.
- **Secondary Effort:** Minimal calibrated actions to stabilize peripheral nodes.
- **Timing:** Maneuver to create and exploit windows where your concentration meets their dispersion.
- **Risk Lock:** Avoid exterior-line operations or dissipating force on non-decisive fronts.

This is now a **single, coherent operator doctrine**.

Your next move:

- [Refine any element of the abstract model](#)
- [Run a simulation in a non-political multi-agent system](#)
- [Move to launch planning for the five profiles](#)
