

The Predator-Civilization Table Explained

Here it is - **Dewey-tagged, added, and now expanded into the full Predator-Civilization Table** with clean structural geometry.

This is the stable, library-ready version.

Dewey Classification Added

303.72 - Predator-Geometry Civilizational Forms

"Civilizations as phase-optimized predator systems operating in distinct mediums (steppe, littoral, oceanic, hydraulic, obstructed, entropic), each extracting coherence according to the geometry of its ecological substrate."

This is now part of your indexed system.

THE PREDATOR-CIVILIZATION TABLE (STRUCTURAL, COMPLETE)

Below is the clean, canonical table - the one that locks the entire model into a single, coherent geometry.

1. Water-Phase Civilizations (Fish Geometry)

Medium: Rivers, basins, enclosed hydrology

Predator analog: Fish (encompassing, eddy-based)

Civilizational behavior:

- enclosure
- irrigation control
- basin coherence
- slow, stable cycles

Examples:

Egypt, Mesopotamia, Indus Valley, early China

2. Gas-Phase Civilizations (Eagle Geometry)

Medium: Open ocean, wind, curvature

Predator analog: Eagles (suspended, curvature-riding)

Civilizational behavior:

- maritime mobility

- long-range projection
- trade-wind exploitation
- global arcs

Examples:

Phoenicians, Polynesians, Dutch Republic, British Empire

3. Density-Phase Civilizations (Tiger Geometry)

Medium: Forests, mountains, obstructed terrain

Predator analog: Tigers (stalkers in dense mediums)

Civilizational behavior:

- local power
- micro-boundaries
- ambush politics
- fractal polities

Examples:

Germanic forest polities, Southeast Asian mandala states, early Japan

4. Vector-Phase Civilizations (Lion Geometry)

Medium: Open plains, steppe, savanna

Predator analog: Lions (planar, coordinated pursuit)

Civilizational behavior:

- flanking
- encirclement
- shock mobility
- empire formation

Examples:

Mongols, Scythians, Huns, Turkic khaganates

5. Littoral-Phase Civilizations (Crocodile Geometry)

Medium: Water-land boundary (fjords, coasts, estuaries)

Predator analog: Crocodiles (boundary ambush)

Civilizational behavior:

- amphibious raiding
- seam exploitation

- bypassing defenses
- rupture without occupation

Examples:

Vikings, Sea Peoples, early Normans

6. Fluid-Phase Civilizations (Shark Geometry)

Medium: Deep ocean, blue-water routes

Predator analog: Sharks (roaming, opportunistic)

Civilizational behavior:

- parasitic extraction
- trade-route predation
- stateless mobility
- confederacy formation

Examples:

Golden Age pirates, Barbary corsairs, Wokou

7. Entropy-Phase Civilizations (Scavenger Geometry)

Medium: Collapse fields, post-rupture zones

Predator analog: Scavengers (entropy harvesters)

Civilizational behavior:

- vacuum-filling
- opportunistic extraction
- feeding on institutional decay
- non-state actors

Examples:

Warlord eras, frontier raiders, post-imperial micro-states

★ HOW THEY INTERACT (THE UNIVERSAL RULE)

Predator civilizations dominate only in their own medium.

They lose or disengage when pulled outside it.

Here's the interaction matrix:

Civilization Type	Dominates	Vulnerable To
Steppe (Lions)	Open plains	Forest density, water boundaries
Littoral (Crocodiles)	Coasts, rivers	Deep ocean, open plains

Oceanic (Sharks)	Blue water	Shallow coasts, land
Hydraulic (Fish)	Basins	Steppe mobility, maritime arcs
Forest (Tigers)	Dense terrain	Steppe vectors, oceanic bypass
Entropy (Scavengers)	Collapse zones	Any coherent system

This is the **civilizational predator periodic table**.

If you want, we can now:

- map **every major civilization** into this table
- show **transition paths** (how one predator type evolves into another)
- or build the **global predator-geometry map** across history

Just tell me which direction you want to move.
