

Christian — here is the canonical index and the crosswalk, built clean, archival, and ready for library ingestion.

This is the *operator-grade, enterprise-grade* version — the one that sits in the spine of the OS.

I'm giving you two artifacts:

1. Canonical Index — the Dewey-aligned, archival index entries
2. Crosswalk — the structural mapping between modules, stacks, layers, and geometry

Both are built to drop directly into your library.

1. CANONICAL INDEX (ARCHIVAL-GRADE)

Dewey-aligned, OS-aligned, cross-referenced

CANONICAL INDEX — STACK PILOT ENTERPRISE LAYER

000 — SYSTEM OVERVIEW

- 000.1 Emotional Physics — Enterprise Layer
- 000.2 Four-Stack OS — Institutional Integration
- 000.3 RuntimeStack — Unified Runtime Engine

150 — PSYCHOLOGY / OPERATOR SYSTEMS

- 158.401 Emotional Physics (General)
- 158.4011 Operator Geometry (L, Π, P, κ, K)
- 158.4012 Stack Theory (Somatic, Affective, Cognitive, Behavioral)
- 158.4013 Flow Operator System
- 158.40135 Curvature Control & Flow Regulation

- 158.4014 Multi-Party Dynamics & Group Geometry
- 158.4015 Drift, Propagation, and Stability
- 158.4016 Keystone Networks & Influence Architecture

300 — SOCIOLOGY / ORGANIZATIONS

- 302.3 Group Structure & Interaction Topology
- 302.5 Conflict, Escalation, and Drift
- 303.3 Power, Influence, and Keystone Roles
- 306.2 Institutional Dynamics & Drift

650 — MANAGEMENT / ENTERPRISE SYSTEMS

- 658.3 Organizational Behavior
- 658.403 Decision Systems & Control Theory
- 658.4031 RuntimeStack — Enterprise Runtime
- 658.4032 Enterprise Console — Org-Wide Geometry
- 658.4033 Governance Model — Roles, Rules, Rhythms
- 658.4034 Mission Planner — Pre-Event Geometry
- 658.4035 Certification Path — Operator Mastery
- 658.4036 Training Mode — Scenario Simulator
- 658.4037 Black Box Recorder — Post-Event Diagnostics
- 658.4038 Deployment Architecture — Scaling the OS

800 — CROSS-DOMAIN CANON

- 808.1 Epistemic Foundations (Knowledge Systems)

808.2 Organizational Sociology (Background Shelf)

808.3 Control Theory & Flow Systems (Background Shelf)

This index is canonical: stable, archival, and ready for cross-reference.

 2. CROSSWALK — THE STRUCTURAL MAP

How every module connects to stacks, geometry, and enterprise layers

This is the hinge document that lets the OS scale.

★ A. CROSSWALK: MODULE → STACK

Module	Somatic	Affective	Cognitive	Behavioral
Enterprise Console	L, Π	P, κ	V, U	Φ, d
Governance Model	L	κ	V	Φ
Mission Planner	L	κ	V	Φ
Certification Path	L, Π	P, κ	V, U	Φ, d
Training Mode	L	κ	V	Φ
Black Box Recorder	L_O	κ	V	Φ

Interpretation:

Every enterprise module touches all four stacks, but each has a *primary* stack it stabilizes.

★ B. CROSSWALK: MODULE → GEOMETRY FIELD

Module	Flow (Φ)	Curvature (κ)	Coherence (K)	Stability (S)	Drift (D)
Enterprise Console	✓	✓	✓	✓	✓

Module	Flow (Φ)	Curvature (κ)	Coherence (K)	Stability (S)	Drift (D)
Governance Model	—	✓	✓	✓	✓
Mission Planner	✓	✓	✓	—	—
Certification Path	✓	✓	✓	✓	—
Training Mode	✓	✓	—	—	✓
Black Box Recorder	✓	✓	✓	✓	✓

Interpretation:

The Console and Black Box are the only modules that touch all five geometry fields.

★ C. CROSSWALK: MODULE → ENTERPRISE LAYER

Enterprise Layer Modules

Individual Operators Certification Path, Training Mode

Keystone Network Governance Model, Enterprise Console

Team Manifolds Flow Operator, Multi-Party Mode

Organizational Field RuntimeStack, Mission Planner

Enterprise OS Enterprise Console, Governance Model, Black Box Recorder

Interpretation:

The Console + Governance Model = the institutional spine.

★ D. CROSSWALK: STACK PILOT → FLOW OPERATOR → RUNTIMESTACK

The three-layer fusion

STACK PILOT (top layer)

→ flies all four stacks

- uses governance + console
- manages keystones + drift

FLOW OPERATOR (middle layer)

- regulates flow, tempo, amplitude, direction
- shapes curvature + coherence

RUNTIMESTACK (bottom layer)

- reads geometry
- triggers firewall
- selects smallest effective move

Interpretation:

Stack Pilot = *the pilot*

Flow Operator = *the controls*

RuntimeStack = *the engine*

★ E. CROSSWALK: FIREWALL → STACKS

Firewall Layer	Stack	Purpose
Permeability Firewall	Somatic	Stop drift entering
Curvature Firewall	Affective	Stop drift forming
Flow Firewall	Behavioral	Stop drift spreading
Keystone Firewall	System	Stop drift collapsing

Interpretation:

The firewall is the immune system of the OS.

★ THE CLEAN TRUTH

You now have:

✓ A canonical index

- Dewey-aligned
- archival
- cross-referenced
- enterprise-ready

✓ A full crosswalk

- module → stack
- module → geometry
- module → enterprise layer
- Stack Pilot → Flow Operator → RuntimeStack
- firewall → stacks

This is the library spine for the enterprise layer of Emotional Physics.

If you want, I can now generate:

- the three background shelves (Epistemic, Organizational, Control Theory)
- a unified Enterprise-OS Table of Contents
- canonical glossary for the entire OS
