

Drift Detector - LinkedIn Edition

Overview

The Drift Detector is a clarity-first diagnostic tool that helps professionals identify when a workplace interaction, message, or process is drifting from baseline expectations. It detects emotional drift, procedural drift, and intention drift using a simple, universal three-step sequence. Built for LinkedIn's professional climate.

How It Works

1. Something Seems Off - The moment your internal signal fires.
2. Identify the Second Point - What changed, repeated, or became harder to name.
3. Identify the Third Point - The direction of drift: emotional, procedural, or intention-based.

Drift Snapshot Output

- Emotional Drift Indicators
- Procedural Drift Indicators
- Intention Drift Indicators
- One-sentence drift summary

Evaluation Sequence

The Drift Detector uses the Balance -> Center -> Move sequence to equalize pressure, locate the real issue, and deliver clarity without conflict.

Product Use Cases

- LinkedIn conversations
- Workplace communication
- Early-stage conflict detection
- Leadership development
- Clarity coaching

Disclaimer

This tool evaluates communication patterns only. It does not judge people, identities, or political

actors.
